

CareInn15

An IPC solution designed to transform the inpatient experience

Overview

CareInn15 is an Interactive Patient Care Solution (IPCS) designed to transform the inpatient experience. It connects patients, caregivers, and hospital services through an interactive bedside platform that enhances comfort, communication, and engagement.

By providing access to personalized information, education, entertainment, and self-service tools, CareInn15 empowers patients to take an active role in their care while helping staff focus on clinical priorities and improving operational efficiency.

Purpose

Integration of Technology

CareInn15 integrates advanced digital tools to connect patients, staff, and services seamlessly, enhancing experience and optimizing hospital workflows.

Operational Efficiency

Automating non-clinical service requests and communication reduces routine workload, allowing staff to focus on direct care and improving response time.

Patient Empowerment

Through an interactive bedside interface, patients can view their care plan, request services, and access educational materials, gaining a greater sense of control and engagement.

Improved Satisfaction

A calmer, more transparent experience increases patient satisfaction, comfort, and trust, reinforcing the hospital's reputation and alignment with quality standards.

Why Hospitals Need CareInn15?

Rising expectation for digital experience

Patients now expect intuitive interfaces and real-time updates even during hospitalization.

Communication gaps

Patients often don't know their attending team or daily plan.

Lack of transparency

Unclear care schedules cause anxiety and reduce satisfaction.

Excessive routine calls

Simple service requests consume staff time but can be automated.

Experience scores now impact accreditation

Metrics such as CBAHI and HCAHPS directly affect hospital ranking and reputation.

▶ Patient Experience of Calm and Control

The CareInn15 solution goes beyond displaying information or facilitating services.

It creates a digital environment that keeps patients engaged, reduces anxiety, and gives them a sense of control over their experience during their stay.

They can view their care plan, follow their schedule, and easily access educational materials and essential services.

This makes the patient feel part of their care rather than a passive recipient; leading to higher satisfaction, a better overall experience, and a more compassionate, modern image for the hospital.

General Features

Smart Integration

- HIS
- Other Hospital Systems (BMS - IPBX - IPTV)

Connectivity

- Internet Browser
- News
- Social Media Apps
- Video Conferencing Apps

Cultural Relevance

- Bilingual Interface (Arabic - English)
- Prayer Times
- Quran and Rukya Apps

Entertainment

- Live TV
- Streaming Apps
- Games

Fully Customizable

- Layout
- Branding
- Apps & Services

Add-on Features

Meal Ordering

Patient Survey

Room Service

Patient Education

CareInn15 Hardware

Ergonomic arm
with multiple mounting options
(ceiling, wall, or floor)

Smart medical-grade tablet
with LCD touchscreen

Support Gloves Touch

16MP Front Camera

Anti-bacterial Housing

Android 13

Return on Investment (ROI)

Operational efficiency

The system allows patients to send non-clinical requests directly to the responsible department, reducing the nursing workload and saving 10–16% of daily nursing time.

Higher patient satisfaction

According to Deloitte and BMC Health Services Research (2020), hospitals implementing digital patient engagement tools achieved 10–20% improvement in satisfaction scores within the first year.

Patient loyalty and referrals

Satisfied patients are more likely to return and recommend the hospital, strengthening long-term trust and enhancing the hospital's overall reputation.

Data-driven management

CareInn15 provides real-time analytics that enable management to monitor engagement and satisfaction, supporting decisions based on live KPIs rather than post-discharge surveys.
